

**Definition of done:**

1. Compiles and runs and doesn't break the code
2. Written tests for task objective
3. Check style guidelines + refactor if necessary
4. Create a pull request that's reviewed by at least one member

**Style Guidelines**

For coding style we are following google's style guidelines for javascript linked below.

<https://google.github.io/styleguide/jsguide.html>

Most Important Guidelines:

1. Naming Conventions need to be similar
2. Formatting (including comments, indents, whitespaces, etc) needs to be uniform
3. Detailed comments to understand each other's code
4. Make a separate class for specific styles (colors, fonts, sizes)
5. Don't have redundant code
6. Create a separate branch for each different feature added

**MVP**

1. Survey sent automatically to the database if locally saved offline
2. Smooth transition of signing in and out of the app
3. Intuitive survey fill out form
4. Tutorial easy to follow with animations/pictures
5. Pictures associated with type of plastic
6. Micro debris is not its separate category in the database
